

Sprint 1 Retro

What Went Well

- Our demonstration went well
- Our deliverable went above the requirements
- We supported each other as a team
- Efficient use of tools
- Team members adapted well to changes and unexpected challenges
- Issues were identified and resolved quickly, minimizing disruption to the workflow
- The team was aligned on the main sprint goals, which helped in maintaining focus

What Could be Improved

- Communication within the team as well as our demis.
- Accountability for deadlines
- Task Prioritization (This will be done with Trello)
- Improve the assignment of tasks to ensure balanced workloads (This will be done with Trello)
- Code reviews to catch potential issues and maintain code quality

Plans for Sprint 2

Sprint 2 focuses on MVP development. By the end of sprint 2 a fully functional MVP must be delivered as well and user journey testing. We brainstormed the following features to be completed for sprint 2:

Customer Side

User Registration and Login: Account management. (Login with verification and account registration completed for first sprint)

Order Placement and Management: Customizable orders, view of order history, menu searching (Drink selection and order placement completed in sprint 1)

Notification System: Customer gets notifications when an order is accepted, ready and has been collected. (OTP generation for order pickup completed in sprint 1)

Receipt Generation: Digital receipts for orders can be downloaded

Merchant Side

Merchant Registration and Login: Account management (Login with verification and account registration completed for first sprint)

Order Placement and Management: Merchants can notify customers when their order is accepted, ready and collected. (Orders can only be collected with correct OTP, completed in sprint 1)

Inventory: Merchants can view the current inventory

Administration Side

Admin Registration and Login: Account creation, account management, verification of login credentials

Inventory: Admin may view and edit inventory items

Menu: Admin can add drinks to the menu as well as edit it

User Journey Testing

- User interface testing
- User registration and login
- Menu and ordering
- Checkout process
- User profile
- Admin panel
- Useability testing
- Notification testing
